Online Learning

E-Learning Concept at Cross Skill-

A method to learn using information technology and advanced communication and multimedia, such as computers, mobiles, smart TVs, digital cameras, and video recorders. These devices need to be connected to networks and the internet in order to convey information to learners fast and cost-efficiently, which facilitates managing the learning process and assessing and evaluating learners' performance.

E-Learning Objectives

E-Learning is an essential part of the whole learning process and an important tool to develop teaching methodologies in order to achieve the academic and professional goals taking into consideration the new changes in the future. The most important objectives of E-Learning are:

1. Disseminating the culture of self-learning and self-reliance in acquiring various expertise and knowledge.

2. Offering and creating an encouraging and enticing atmosphere towards meaningful learning due to what it has of modern technological tools.

3. Boosting learners skills in using information technology and communication in searching for information, which is very helpful in the learning process.

4. Expanding the range of learning as it offers various sources of information, learning aids, interactive methods that students use wherever and whenever they want whether they are on or off campus

5. Offering learners enough flexibility and control over the content.

6. Allowing easy communication between students and teachers as well as among learners themselves.

Forms a sense of learning

Following are the points through which Cross Skills forms a sense of learning -
 1.Accessibility to courses inside and outside classrooms (campus- home) anytime.
 2.Active communication and interaction with teachers via electronic/online methods (such as email, forums, chatting), in addition to communicating with other classmates.
 3.Various learning resources (videos, recordings, graphs and pictures, and text files).
  Progress reports are readily available.
  Receiving emails, announcements, notifications, or remarks from the course teacher.
  Receiving online learning support via seminars (video conference) on Blackboard that is presented by the course teacher to help learners addressing issues in understanding certain parts of the course
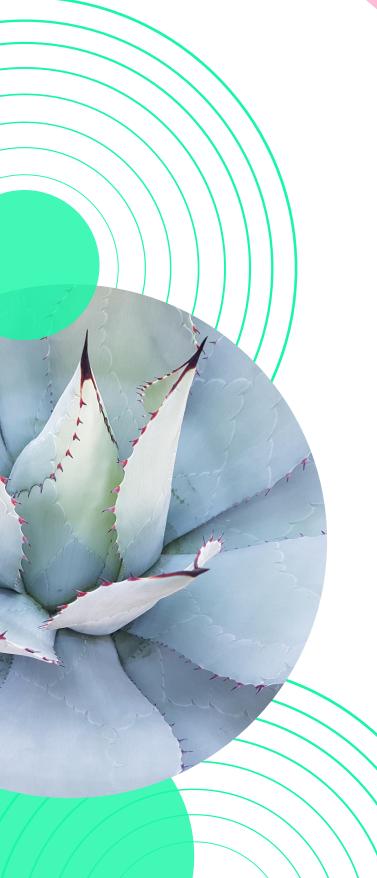

How do we evaluate?

Assessment is done automatically, without the interference of the course teacher or with due interference of teachers.It is based on the number and frequency of learner's submissions, access, and constant interaction with different online activities such as homework, assignments and some midterms and finals. Different courses have different grades for participation and uses.

Registration Details

Now

REGISTRATION FEES -------------------------We can write about the details if any here-----------------------

How to register?
Reach us out at our contacts,Websites,etc and discuss with us what with you.It is just a simple way to register.

NOTE
1)Students should bring their own Laptop for hands-on training and learning
2)Certificates will be provided for the registered participants. 3) Spot registration is not allowed.

--------------------------------------These all are sample note points we can discuss about the note points and can add to this section.Basically it will contain all the leftover points that we have to convey to the audience---
